HealthScope AI.

An **AI-powered**, integrated **health ecosystem** that connects doctors, hospitals, NGOs, and underserved patients to streamline affordable healthcare access and driving proactive well-being.

TECHNICAL APPROACH.

SCALABILITY

React.js (frontend) and Node.js (backend) are lightweight, modular, and cloud-ready. This makes the solution easy to scale across multiple hospitals in India without heavy infrastructure costs.

OPERATIONAL FEASIBILITY

- Fits within existing hospital workflows
- Compatible with NDHM digital standards.
- Open-source → low development & maintenance costs.

STRATEGIES

1. Partner with certified medical waste agencies, run government-approved pilot projects.

2. Offer cost-saving incentives, simplified digital workflows, and sustainability credits.

IMPACTS AND BENEFITS

BENEFITS

Social: Inclusive, preventive, and **community-driven** healthcare

Economic: **Reduces** treatment costs via **early detection**, supports insurance/government programs

Environmental: Optimizes resource allocation → **fewer** unnecessary **physical visits**, less travel emissions

Technological: **Scalable AI-powered** platform, secure lifetime health records

IMPACTS

Patients

Seamless healthcare access with multilingual dashboards, role-based navigation and AI-driven insights – empowers patients to track symptoms, reports, nearby clinics easily.

Hospitals & Doctors

Operational efficiency boost through smart dashboards (appointments, AI alerts, inventory, patient referrals) → less admin burden, faster decision-making effective

NGOs

Data-driven outreach via community heatmaps, case-matching, and de-identified reports → ensures resources reach the critical areas effectively

Scalable, future-ready platform integrates AI, maps, multilingual accessibility → strengthens collaboration between hospitals, NGOs, patients, and admins, improving national healthcare outcomes

PROTOTYPE FEATURES

AI Analysis → Simplifies lab reports & predicts health risks in real time.

Doctor Dashboard → View patient summaries, campaign data, and community reports.

Doctor Dashboard

Patient Dashboard → Track vitals, lab reports, and receive preventive alerts.
